

## ROLE OF TRIBAL FARM WOMEN IN DECISION MAKING

N.M. Chauhan\*

### ABSTRACT

Empowerment of the Farm Women in Decision Making is a need of the time in agrarian country like India, where farming is a family occupation. Thus study was therefore designed to appraise the participation of Tribal farm women in decision making related to home, farm and animal husbandry practices. Results of the study revealed that tribal farm women play dominant role in making decisions related to animal husbandry enterprise. Whereas, they found recessive in decisions regarding farm operations. It is amazing to note that except home decoration, in most of the areas of home management the decision was dominated by male/husband.

### INTRODUCTION

Farm Women is an integral part of the human Society. Women contribute one third labour force required for farming operations and allied enterprises. They have been playing significant role in Home, farm and Allied activities. In Indian context farming is a family occupation. Farm Women is an associate to her husband in various activities has greater role in Decision making process. Thus, the timely and judicious decision making ability of the farm family have a direct bearing on the development of agriculture sector. Empowerment of the farm women in Decision making is a current need of the time in an agrarian country like, India. Tribal "Adivashi" women of Southern part of Gujarat though illiterate, contributing a lot to the agricultural development in the region. It is therefore imperative to study the pattern of adivashi women in decision making related to home, farming and livestock operations. The study was conducted with an objective to appraise the participation of tribal farm women in decision making related to home, farm and animal husbandry enterprise.

### RESEARCH METHODOLOGY

Navsari district of South Gujarat is a Tribal district. The present study has been undertaken particularly on the role of tribal women in agriculture and animal Husbandry in the Navsari District. Among five talukas of the district two talukas viz. *Navsari* and *Gandevi* were selected randomly for the study. Three villages were selected from each

talukas. Thus, the investigation was carried out in six villages. Twenty Tribal farm women from each village was selected randomly from the list of the women engaged actively in Agriculture enterprise. Thus, study was comprised of 120 tribal farm women. The response of respondents regarding the decision making was collected in "Only self", "Only husband" and "Together with Husband" and "Joint decision with family members".

### RESULTS AND DISCUSSION

#### Involvement of the tribal farmwomen in decision-making:

##### Decision making about home management

The data on decision making pattern of the tribal farmwomen with respect to home management, farm management, and animal husbandry management are depicted in Table 1, 2 and 3. It is apparent from Table 1 that *adivasi* farm women were taking self decision in case of decoration of house (79.17 per cent) and selection and preparation of food (70.83 per cent). The husband dominated decision making events were house repair (79.17 per cent) followed by borrowing money for home management, repayment of loan, manner of saving, repayment of loan, manner of saving, children's education, children's occupation and construction of new house.

Joint decision was dominated in case of children's marriage (81.67 per cent) followed by selling and purchasing of ornaments (75.83 per cent),

construction of new house and manner of saving.

#### Decision making about farm management

The data with regard to the decision making of rural farm women in farm management (Table 2) indicated that majority of the decisions regarding farm management were not taken by tribal farm women, thus they were husband dominated decisions such as. when to irrigate the fields (87.50%), quantity and type of fertilizers to be used in the farm (85.00%), introduction of new crop variety, buying farm machinery/equipment, using plant protection measures, borrowing money for farm operation, installing oil engine, electric motor and pumps, selection of seed, deciding area to be sown under each crop etc. The finding is also supported by G .Reddy and Rashid (1997).

The joint decision was made only in case of buying and selling of land (71.67%) followed by, hiring farm laborers (66.67%), buying and selling of land and selling of surplus farm produce. It can be concluded that the tribal farm women did not play dominant role in making important decisions of farm management.

#### Decision making about animal husbandry:

It was observed from Table 3 that the decisions about selection of fodder and feed was dominated by tribal farmwomen (81.67%) followed by sale of milk and its products. The joint taken decisions were sale and purchase of animals (65.00%) followed by

selection of animal breed and keeping size of herd.

It can be concluded that the important decisions regarding animal husbandry were dominated by tribal farm women themselves. The husbands remain recessive in, decision making regarding animal husbandry. The findings of the present study were similar by findings earlier reported by Praveena et al. (2005).

#### CONCLUSION

The inference can be drawn from the findings that *adivasi* farm women were taking self decision in case of decoration taking of house and selection and preparation of food. Rural farm women play recessive role in making important decisions related to farm management whereas the decisions regarding animal husbandry enterprise was dominated by them.
